

# FLOOR LABEL FRAMES

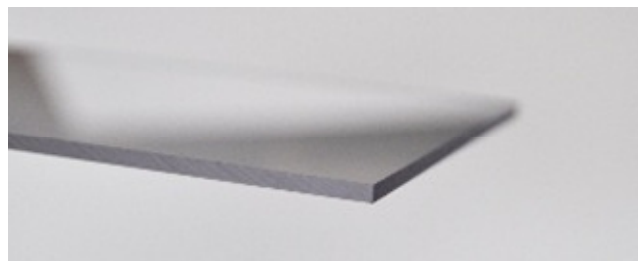

Warehouse **identification**,  
floor **marking** and **safety** solutions.

Floor label frames are made from CNC machined aluminium sheet. Their design helps reduce impact damage with a beveled edge and rounded corners to reduce snagging. Screws are also counter sunk to prevent them catching on pallets, etc.

Anything placed on the floor is susceptible to damage and in some environments, nothing will last long. However, Fortega floor label frames are ideal for helping extend the life of labels which are adhered to the floor. They create a barrier to the label edges and a clear plastic infill window, adds to the protection and reduces dirt and print surface impacts.

Fortega provide several configurations and sizes, however their most popular are the 127mm x 178mm frame which accepts a 76mm x 127mm label. The label can be removed and replaced as needed, with an adhesive or none-adhesive backing.

3.2mm thick frames are typical amongst the various options available however the 1.6mm label frame reduces impact risk further with its lower profile.

Fortega can provide all floor label frames with location labels as needed, which will be designed specifically to your needs and variable location reference data requirements.

-  No barcode shrinkage.
-  Any application temperature.
-  Temporary & permanent attachment.
-  Can be used in freezers.
-  Chemical resistant.
-  Installation services available.
