

LPN PALLET LABELS

Warehouse **identification**,
floor **marking** and **safety** solutions.

As a producer of high-volume sequential run labels, Fortega have developed strategies and inventory supply schedules to help customers maintain a reliable and continuous supply of license plate number labels (LPN labels).

Our production methods vary depending on the level of durability and volume needed per order. Using low grade paper face stock is often sufficient for most, as it's a low-cost consumable item. Others may look for a longer lifespan and opt for polyester composite materials which are more hard-wearing and resilient to changing conditions.

Our typical high standards of quality and accuracy are applied to the production of consumable LPN labels, giving customers peace of mind that their barcodes will scan on the first attempt, also that content is easy to read and the labels are fit for purpose.

Single and multi-site supply agreements are standard, both are handled with care as we understand the importance of time-critical deliveries and the logistics involved for some facilities.

- High-definition print,
- Permanent adhesives,
- Supplied on rolls or sheets,
- Large range of label sizes,
- Quality and accuracy checks,
- Multiple site shipments,
- Stockholding for quick supply.
