

RESTICK RACK LABELS

Warehouse **identification**,
floor **marking** and **safety** solutions.

Restick rack labels are a bespoke designed removable and repositionable location label. They are used to identify storage locations on pallet racks, shelf slots and on totes where labels may have multi-tag use.

Repositionable Restick rack labels, made from poly-composite material, form part of our dynamic placement range. Their construction offers maximum durability, as with all our products, while being cost effective.

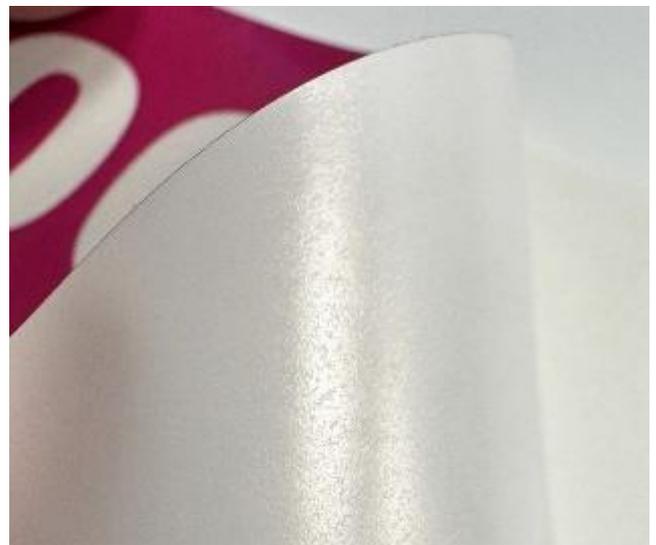

Tear-proof technology is particularly important as it ensures the labels maintain integrity and do not break down in use. This enables multiple repositioning which can bring many benefits.

Features:

- Repositionable adhesive,
- Protective coating in gloss or matte finish,
- Tear-proof technology,
- Alpha, numeric and alphanumeric variable data,
- Full colour print for colour coding,
- Designed for easy scanning and readability to global barcode standards,
- All barcode types available.

Restick rack labels are a great option for facilities using internal or temporary resources to install the labels. If one is applied incorrectly, it can be removed and repositioned without damage to the label.

Complete and clean removal is the key benefit of these labels, your racks are returned to new, without adhesive being left behind.
