

# WAREHOUSE LABELS

Warehouse identification, floor marking and safety solutions.

Fortega provide high quality warehouse labels with some of the toughest materials available, extended definition and unparalleled accuracy.

Investment in technology places Fortega ahead in the supply of durable barcode labels, with advanced print processes that create high-definition barcodes with global standard verification rates.

All forms of data can be applied to the labels including barcodes, alpha and numeric characters, and images, making them ideal for variable location referencing and data capture in logistics and manufacturing.

Barcode options include linear, and two-dimensional (2D) variations of all code symbology types.

To offer a unique custom approach, a large variety of material options are held in stock so customer product needs and lead-times can be met. Polyester is most used, however plastic composite, paper, reflective, aluminium, etc., have their place. Quick response on rack labels, floor labels, bin tags, LPN labels, magnetic shelf labels and freezer labels make Fortega dependable.

Tailored design, in-house production and managed installation services will make Fortega a trusted partner to your company.

Fortega warehouse labels feature:
