

# WAREHOUSE LINE MARKING

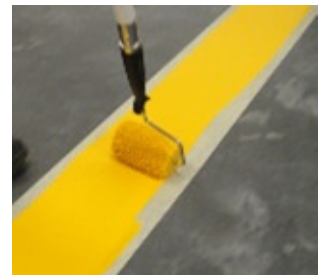

Warehouse **identification**,  
floor **marking** and **safety** solutions.

Fortega warehouse line marking and walkway solutions cover a wide range of needs for indoor applications. Design, durability, and budgetary aspects are discussed during consultations with our customers and brought together in plans and diagrams so working models can be considered and approved prior to installation.

We offer a complete solution in-house from conceptual design, solution development, drawings, and scheduling, through to installation, all to help optimise customer operations.

Line marking installations vary in cost, based on the method of concrete preparation and paint system used. Typically, the lower durability options are quicker to apply and cheaper. The more durable methods are considered an investment. We work with customers to create a mix of solutions to remain within budget.

## Additional information:

- Full consultation and planning,
- Weekend/night installations available to minimise disruption,
- Options available for chemical resistance,
- Can be cleaned using conventional methods.

Fortega provide painted, taped, and illuminated options, ask us about their benefits.
